

## Introducing SFO's NEW Aircraft Noise Tracking Technology

We are excited to announce the arrival of SFO's NEW Aircraft Noise Tracker. This tool gives you a near real-time look at actual flight tracks and noise levels around the airport. You can investigate aircraft-related noise events, validate your aircraft noise calculations, and submit community concerns directly to the SFO Aircraft Noise Abatement Office.

The tool enables you to:

- **Find Specific Aircraft Information** including an aircraft's type, altitude, origin/destination airport, and other flight

identification. Locating yourself on the map offers additional location-specific information.

- **Determine Aircraft and Community Noise Levels** from permanent and portable noise monitors deployed by the airport which are shown by the colored numbered dots.
- **Replay and Investigate Historical Flights**
- **Display Map Layers** of major SFO arrival & departure routes and noise contours
- **Submit a Noise Report** with SFO's Aircraft Noise Abatement Office (Coming end of October)
- **See Flights in 3D.** Our previous tracker, Volans, is still available within the application and allows you to see flights in a 3D view.

Your feedback is important to us! Please share your impressions of the new flight tracker tool by emailing us at [noiseabatementoffice@flysf.com](mailto:noiseabatementoffice@flysf.com)
