

My Gaza food airdrops proposal piece just went live on The Forward (a mainstream Jewish publication). **Would you please send this out to all of your concerned and interested contacts and ask them to call the White House, Congress people, the State Department, and humanitarian organizations to push for the immediate implementation of this action to stop hunger in Gaza?**

The proposal has multiple precedents that confirm its viability as a quick way to bypass Hamas's theft of aid and the distribution/logistics bottlenecks. It could absolutely help prevent the full onset of the famine that is predicted to take place within the next 1-3 months.

**Gazans are starving. Airdrops of aid could help change that**  
Aerial food drops over Gaza could help prevent a famine while bypassing security and distribution challenges.
