

Pacifica - Landslides and the General Plan and another appeal

I recently spent time at the city offices looking at landslide maps from 1982 as part of my work on the current General Plan update: 475 mud/debris flow landslides in one winter alone!

These images are from 1970, so some of the homes that existed in 1982, like the one on Oddstad where the kids died, are not shown. The landslide notations were all added by hand; the Roman numerals indicate what type of slide it was. Images are in order from south to north, starting with Pedro Point.

Can you find your home?

The new landslide maps in the General Plan are still missing some of this information, and they are missing ANY information on fire hazards within the city limits. Mark Hubbell and I filed an appeal of the Planning Commission's approval. Stay tuned for the hearing date in front of the City Council.
